Training Guide Text

Loan Factory LO Development Platform

Training Asset Package: Lead Funnels and External Website Widgets

Source: Loan Factory portal screenshots supplied by Jeremy McDonald **Track:** Sales and Marketing 401 - Content and Marketing **Audience:** Loan Factory loan officers setting up lead capture widgets

Source Digest

This guide shows how a loan officer can create an external website widget from the Loan Factory portal. The page explains the SDK script, where to place it on an external website, how to add a widget, how to choose a widget type, and how to copy the generated script.

Step-by-Step Walkthrough

Goal

Create a Loan Factory lead generation widget that can be embedded on an external website or landing page.

Who This Is For

Loan Factory loan officers who have a personal website, team website, landing page, blog, or partner page and want a lead capture tool connected to their Loan Factory account.

Before You Start

You need access to your Loan Factory portal and the external website where the widget will be embedded. If you do not manage that website yourself, send the generated script to the person who manages the site.

Exact Navigation Path

Loan Factory portal > Marketing Features > Lead funnels & Widgets > Widgets - External websites.

Steps

1. Open **Lead funnels & Widgets** from the Marketing Features menu.
2. Review the SDK script shown at the top of the page. This script is inserted into the external website `<head>` section.
3. Click **Add** to create a new widget record.
4. Enter the external website URL where the widget will live.
5. Add a short internal description so you know what the widget is for.
6. Choose the widget type. Available examples shown in the screenshots include Quote form, Long form, Long form 2, HomeReady First long form, Rate table, 1003 Application Widget, Today's rate, Rate chart, Veterans affairs loan, Home Equity Line of Credit, Home Equity Line of Credit Application, Basic form, and Qualification Mortgage Calculator.
7. Optional, enter a lead source so incoming leads can be tracked correctly.
8. Customize the widget if needed.
9. Copy the generated script and submit the widget record.
10. Place the widget script on the external website where you want the widget to appear.

Common Mistakes

- Skipping the SDK script in the website ``<head>`` section. - Choosing a widget type before knowing the landing page goal. - Leaving lead source blank when tracking matters. - Sending a script to a web developer without the external website URL and widget purpose. - Assuming the widget is live before testing the external page.

How to Know It Worked

The widget should display on the external website. When a visitor interacts with it, the lead source and widget source should make it clear where the lead came from.

Training Module Version

Lesson Title: Add a Loan Factory Lead Widget to an External Website

Subtitle: How to create and embed a Loan Factory widget for lead capture outside your Loan Factory website

Estimated Time: 10-15 minutes

Learning Objective: The loan officer can create a widget record, choose the right widget type, copy the script, and give the embed code to the correct website owner.

Sales and Marketing 101-601 Placement

Recommended Class: 401 Content and Marketing

This belongs in 401 because it teaches a practical digital marketing setup step. It can also connect to 501 Pipeline and Sales Systems when the lead source and follow-up process are added.

AI Advantage Placement

AI can help the loan officer choose the right widget, write page copy around the widget, create follow-up text messages, and generate a simple retargeting or nurture plan for widget visitors.

90 Second Walkthrough Script

Hook: If you have an external website, do not just send people there and hope they call. Add a Loan Factory widget so visitors can raise their hand.

Steps: Go to Marketing Features, then Lead funnels & Widgets. Open the external websites widget tab. Review the SDK script, click Add, enter your external website URL, pick the widget type, enter a lead source, customize if needed, then copy the script and submit.

Common Mistake: Do not forget the SDK script in the website head. Without that, your widget may not load.

Close: After the widget is embedded, test it from the public page and confirm the lead source is tracking correctly.

Platform Resource Card

Title: External Website Lead Widgets

Category: Marketing Tools | Lead Capture | Website Setup

Short Description: Create and embed Loan Factory widgets on external websites so visitors can request information, pricing, or a full application.

Tags: Lead Widgets, Website Widget, External Website, Lead Source, SDK Script, Rate Table, Quote Form, 1003 Widget

Audience: Loan Factory loan officers with external websites or landing pages

CTA Button Text: Create Widget

Quiz

1. Where do you create an external website widget? Answer: Marketing Features > Lead funnels & Widgets.
2. What script must be inserted into the external website head? Answer: The Loan Factory SDK script.
3. Why should you use a lead source? Answer: To track where the lead came from.
4. Name two widget types shown in the screenshots. Answer: Quote form and Rate table, or any two from the dropdown list.
5. What should you do after embedding the widget? Answer: Test the public page and confirm lead tracking.

Implementation Note

Recommended route: Sales and Marketing > 401 Content and Marketing > Website Lead Capture > External Website Widgets.
