Training Guide Text

Loan Factory LO Development Platform

Training Asset Package: Website Settings and QM Pricer Setup

Source: Loan Factory portal screenshots supplied by Jeremy McDonald **Track:** Sales and Marketing 401 and 501

Audience: Loan Factory loan officers setting up their Loan Factory website and quote/pricer experience

Source Digest

This guide covers the Loan Factory Website Settings page and the QM Pricer settings tab. It includes the personal website URL, website visibility options, Best Price Guarantee visibility, email and phone display, website video, preview thumbnail logo, bio, custom scripts, working schedule, custom header menu, QM Pricer disclaimer language, default quote form values, rate display settings, buttons shown in quote results, and loan term display settings.

Step-by-Step Walkthrough

Goal

Configure the Loan Factory website and QM Pricer so the loan officer's website is presentable, trackable, and useful for lead conversion.

Who This Is For

Loan Factory loan officers who want their Loan Factory website and quote/pricer experience to support online lead generation.

Exact Navigation Path

Loan Factory portal > Website Settings > Website tab or QM Pricer settings tab.

Website Settings Steps

1. Open Website Settings from the left menu. 2. Confirm whether you want to use your own domain name. 3. Confirm the website URL slug. 4. Decide whether the website URL should show on the email signature. 5. Confirm whether to join and promote the Best Price Guarantee if eligible and approved. 6. Decide whether email and phone number should show on the website. 7. Add a website video URL if you have one. 8. Upload or replace the background/profile image if needed. 9. Upload a thumbnail link preview logo for social and messaging previews. 10. Review and update your bio. 11. Add custom scripts only when you know what they are for, such as Google tracking tags or remarketing scripts. 12. Add custom metadata only when needed. 13. Confirm working schedule and all-day availability settings. 14. Review custom header menu and loan product sections.

QM Pricer Setup Steps

1. Open the **QM Pricer settings** tab. 2. Confirm whether contact information is required to get a price. 3. Add the contact information disclaimer if needed. 4. Review the general disclaimer. Use clear language explaining rate accuracy, volatility, and that pricing is not a loan approval. 5. Choose which lenders to show, same as company or preferred lenders. 6. Review default quote form values including loan type, purpose, loan amount, property value, ZIP code, occupancy, and FICO range. 7. Confirm FHA upfront MIP and VA funding fee options. 8. Review rate display settings, including whether rates show

around the best rate or within a specific range. 9. Choose how many rates to display. 10. Decide whether to show lenders by name, logo, or not at all. 11. Review whether compensation details are displayed. 12. Set any BPC minimum/maximum fields only if appropriate. 13. Confirm whether to show rates in .125. 14. Decide whether to display create alert, apply, qualify, and view fees buttons. 15. Review which loan terms display on login and non-login quote views.

Important Jeremy Compliance Note

Jeremy's business uses lender-paid compensation only. If a screenshot shows borrower-paid compensation selected, do not copy that as a default setting for Jeremy without specific approval. Training should say to verify compensation settings with leadership or company policy.

Common Mistakes

- Leaving the website bio outdated. - Forgetting to test the public website URL after changes. - Adding multiple tracking scripts without understanding what they do. - Showing pricing buttons without a clear follow-up plan. - Copying QM Pricer compensation settings without checking company policy. - Displaying too many loan terms, which can confuse consumers.

How to Know It Worked

The public Loan Factory website should show the updated profile, video, bio, and visibility options after the cache delay. The QM Pricer should show rate/quote output according to the selected display rules.

Training Module Version

Lesson Title: Set Up Your Loan Factory Website and QM Pricer

Subtitle: Make your Loan Factory website ready for traffic, tracking, and quote requests

Estimated Time: 20-30 minutes

Learning Objective: The loan officer can configure website visibility, profile content, tracking fields, and QM Pricer quote display options.

Sales and Marketing 101-601 Placement

Recommended Class: 501 Pipeline and Sales Systems

Website setup can be introduced in 401, but QM Pricer belongs in 501 because it connects marketing traffic to quote requests, lead capture, and pipeline follow-up.

AI Advantage Placement

AI can help write the bio, create video scripts, draft compliant call-to-action copy, summarize disclaimer language, and turn QM Pricer settings into a repeatable checklist.

90 Second Walkthrough Script

Hook: Your Loan Factory website is not just a digital business card. It is where leads decide whether to take the next step.

Steps: Open Website Settings. Review the URL, visibility settings, Best Price Guarantee setting, email and phone display, website video, images, preview logo, and bio. Then open QM Pricer settings. Confirm disclaimers, default quote values,

lender display, buttons, and loan terms.

Warning: Do not blindly copy compensation settings. Verify the proper lender-paid setup and company guidance.

Close: After saving, open the public website and test the quote flow like a borrower would.

Platform Resource Card

Title: Website Settings and QM Pricer Setup

Category: Website Setup | Pricing Tools | Lead Conversion

Short Description: Configure your Loan Factory website and QM Pricer so your online presence supports clear lead capture and quote requests.

Tags: Website Settings, QM Pricer, Quote Form, Website Bio, Custom Scripts, Best Price Guarantee, Rate Display, Lead Conversion

Audience: Loan Factory loan officers

CTA Button Text: Set Up Website

Quiz

1. Where do you update your Loan Factory website settings? Answer: Website Settings.
2. What tab controls the pricer display and quote defaults? Answer: QM Pricer settings.
3. Why should you be careful with custom scripts? Answer: Scripts affect tracking and website behavior, so they should be intentional.
4. What should you verify before copying compensation settings? Answer: Company policy and leadership guidance.
5. What should you do after saving website settings? Answer: Test the public website and quote flow.

Implementation Note

Recommended route: Sales and Marketing > 501 Pipeline and Sales Systems > Website and QM Pricer Setup.

Recommended related lessons: Lead Funnels and Widgets, Google Ads and GA4 Tracking, Website Visitor Audiences, Facebook Ads Setup.
